Ecology: Principles and Applications at the Landscape Level

June 17 - 29, 2024

Instructors

Tom Lautzenheiser tlautzenheiser@massaudubon.org
Walter Poleman walter.poleman@uvm.edu

Classroom: TBA

Office: TBA

Course Format

- Lectures - June 17, 24, and 26 (9am – 1pm)
- Field Trips - June 18, 20, 25, and 27 (9am - 4pm)
- Final Exam – June 29 (9am – noon)

Course Description

Ecology is the study of organisms and their environments — and the interrelationships between the two. During this two-week, field-based course we'll study ecological principles and applications through an intensive, integrative investigation of the White River and Ottauquechee River watersheds. Rather than relying primarily on textbook examples of ecological concepts, we'll venture into the local landscape to explore the diversity of life and illustrate these concepts.

We'll spend two-thirds of the class time visiting a variety of field sites and learning an ecological approach to landscape assessment that stresses not only inventorying the biotic and physical components (pieces), but also examining how these pieces are distributed in the landscape (patterns) and what forces drive these patterns (processes). A strong emphasis will be placed on interpreting the history of how the landscapes we see today have unfolded through time — from their geological origins to the impacts of European settlement and 20th century land-use. We'll look to the future of the landscape by exploring strategies for maintaining and restoring the ecosystems and organisms native to the region.

The science of ecology will play a critical role in guiding our society as we face the increasing complex challenges of the 21st century. As Oswald Schmitz states in the introduction to our companion text, ecology helps us “appreciate the intricate ways that humans are connected to their environment and how their interaction can alter the sustainability of the very ecosystems on which they are a part and from which they derive vital services.” This course will provide aspiring environmental professionals with a solid introduction to the science behind

biodiversity conservation, natural resource management, and other landscape-level issues in the context of increasing climate instability.

Learning Objectives

By the end of the course, it is our hope that the students will:

- understand the influence of the physical environment on the biological components of the landscape;
- be able to identify basic features of soils, surficial geology, and bedrock geology; key out plants; and recognize common natural community types;
- be able to begin to decipher the imprint of human history and natural disturbance on the local landscape;
- recognize and apply essential ecological concepts, including natural selection, succession, biogeochemical cycling, energy flow, landscape connectivity, and biological diversity;
- be familiar with the scientific method and its applications;
- understand the importance of managing landscapes at the watershed scale;
- recognize the interconnectedness of landscape elements and the complexity of environmental issues; and
- understand the basic principles of ecological planning.

Course Readings

- Wetland, Woodland, Wildland: The Natural Communities of Vermont, 2nd Edition (2019)
- Ecology and Ecosystem Conservation (Schmitz 2007)
- Additional course readings will be available on the course Canvas site.

To be read by the start of class on:

June 17

- Ecology: Preface and Chapter 1
- The Round River, by Aldo Leopold

June 18

- Ecology: Chapter 2
- Wetland, Woodland, Wildland – Parts 1-3
- Species in the Spotlight (Northern Red Oak, Red Spruce, & Eastern White Pine)

June 20

- Ecology: Chapter 3, 4
- Ready Or Not, Garlic Mustard Is Moving In (Rodgers, Stinson, and Finzi 2008)

June 24

- Ecology: Chapters 6
- Wetland, Woodland, Wildland (pp. 84-99, 138-147, 287-300, 311-313, and 457-459)
- Species in the Spotlight (Sugar Maple, White Ash, & Butternut)

June 25

- Ecology: Chapter 8, 9
- What Did Vermont's Pre-settlement Forest Look Like? (Snyder 2003)
- The Myth of the Unchanging Forest (Lautzenheiser 2011)

June 26

- Reading the Forested Landscape (Chapter 2)
- Species in the Spotlight (Eastern Hemlock, Red Maple, & Yellow Birch)
- Wetland, Woodland, Wildland (pp.433-436)

June 27

- Vermont Conservation Design: Maintaining and Enhancing an Ecologically Functional Landscape
- Ecosystems and Their Services – Millennium Ecosystem Assessment
- Ecology: Chapter 10
- Species in the Spotlight (Basswood, Trembling Aspen, & American Beech)
- Wetland, Woodland, Wildland (pp. 148-153 and 390-393)

Course Schedule**Monday, June 17 (9am – 1pm) - Classroom**

- Course Introduction
- Overview of Southern Vermont Piedmont Biophysical Region
- Landscape Analysis Frameworks
- Bedrock and Surficial Geology
- The Natural Community Concept
- Ecology and Natural History
- Wetland Ecology
- Ecosystem Dynamics and Community Ecology
- Speciation and Natural Selection

Tuesday, June 18 (9am - 4pm) – Field Trip to Kent's Ledge

- Landforms
- Pattern Observation/Scientific Method
- Quantifying Pattern

- Introduction to Pieces (Trees)
- Soils

Wednesday, June 19 - No Class – Juneteenth Holiday

Thursday, June 20 (9am - 4pm) – Field Trip to Randolph

- Invasive Species
- Water Quality
- River and Floodplain Forest Analysis

Monday, June 24 (9am – 1pm) – Classroom

- Landscape Change
- Disturbance regimes
- Succession
- Climate Change

Tuesday, June 25 (9am – 4pm) - Field Trip to Zebedee Wetland in Thetford

- Wetland Ecology
- Land-use History

Wednesday, June 26 (9am-1pm) - Classroom

- Principles of Landscape Ecology, Conservation Biology, and Ecological Planning

Thursday, June 27 (9am – 4pm) – Field Trip to Marsh-Billings-Rockefeller NHP

- Agricultural and Post-Agricultural Landscapes
- Forest Stewardship

Saturday, June 29 (9am – 1pm) – Final Exam

Assessment & Grading

- Final Exam (90%) – please note that this exam will have indoor and outdoor components
- Midterm Assignment (10%) – due June 24 (9 AM) – details will be provided in class.

Required field gear

- rain gear
- waterproof hiking boots
- clipboard
- field notebook
- writing utensil (mechanical pencils are best)

- knapsack with extra clothes,
- water, and snacks
- lunch!!

optional items:

- hand lens
- bug repellent
- binoculars
- field guides
- camera

Important Notes

- Since our field trips will often be off-trail and in buggy environments, we encourage you to wear long pants and long sleeves.
- Ticks are a particular health concern due to their potential when feeding to transmit serious disease to people. We recommend the use of appropriate personal protective measures (e.g. permethrin treated clothing and/or EPA-approved repellent) and thorough end of day tick checks following field trips to reduce the risk of tick bites.
- Field trips often involve extensive hiking in hilly landscapes.
- Students are expected to attend all classes and abide by the policies outlined in the VLS Student Handbook.
